Dear Kornberg,

I am now preparing a "Leeuwenhoek Lecture" which I have to give on November the third in London (Royal Society). The title is "viral functions". I have heard from François Jacob that you have discovered that a "new" D.N.A. polymerase is produced as a result of bacteriophage infection. Is this discovery sent to press ? If so, could I have the privilege to read the manuscript or at least the summary ? and what is the reference ? If it is not sent to press may I quote it ? In the case you would agree, could you give me a few lines and tell me how it should be quoted and ~~who~~ are the authors.

With kind personal regards,

Sincerely yours,

A. Lwoff
